General Information

InkTec’s PowerChrome K3 ink has four different blacks. It allows customers in photo printing business to have higher printing quality output of images when printed in black & white. In addition, new vivid magenta and light magenta provide wider colour gamut compared with its counterparts on the market. PowerChrome K3 has also fast drying time on various media and is suitable for fast printing mode. You’ll experience more realistic and brighter image than previous InkTec PowerChrome ink.

Wider Colour Gamut

- High Density pigments for extremely wide colour gamut
- Very similar colour gamut to OEM

Superior Scratch Resistance

- Superior scratch resistance due to improved pigment and resin chemistry

---

**InkTec Europe**  Unit 1&2, Glenmore Business Centre, Range Road, OXON, OX29 0AA, United Kingdom

Significantly Improved Gray Balance While Eliminating Colour Casts

- Outstanding highlight-to-shadow grayscale accuracy for a smoother tonal range
- Virtually eliminating any bronzing of the basic pigment chemistry

Plug & Play
- 100% compatible with OEM ink without flushing out inks or replacing parts
Superior Longevity

- Use high-density and resin coated pigments
- It delivers superior longevity and excellent water-resistance

Applications

- Window display, Fine art, Exhibits, Photographs
